

## **BPC-157**

**BPC-157** is a partial sequence of body protection compound (BPC) found in human gastric juice. It has been researched to accelerate healing of a variety of wounds including tendon-to-bone healing and healing of damaged ligaments. Research has also discovered a potential protective effect against gastric ulcers. In addition, it has been studied for the protection of the liver from toxic damage (alcohol, antibiotics, etc.). Lastly, it has been studied for the healing of traumatic brain injury (TBI).

BPC-157 has been researched to:

- Improve healing of many types of wounds
- Protection of intestinal organs and prevention of stomach ulcers
- For combat of leaky gut, IBS, gastrointestinal cramps and Crohn's disease
- Accelerated healing of skin burns
- As an anti-inflammatory
- The integrity of mucosal lining GI tract
- Repair of tissues of GIT, tendons, ligaments, brain, bone, etc.
- Improve digestive function
- Protection and promotion of healing of liver due to toxic stress.

In response to tendon and ligament injury, BPC-157 supports healing by increasing type 1 collagen in these tissues.

BPC-157 is cytoprotective and thus helps maintain the mucosal lining of the GI tract. As an anti-inflammatory, it supports the protection and healing of inflamed intestinal tissues. It also may play a role in tissue damage repair by increasing blood flow to damaged tissues. BPC-157 is stable in human gastric juice and has no reported toxicity.
