

Sermorelin Acetate is a compound similar in structure to growth hormone releasing hormone (GHRH). Sermorelin has been known to stimulate the pituitary gland to produce and secrete growth hormone. It is a bioidentical synthetic hormone peptide sequence comprised of 29 amino acids.

Sermorelin has been shown to be effective in raising growth hormone and insulin-like growth factor - 1 level which helps to:

- Increase bone density
- Regenerate nerve tissues
- Strengthen the cardiovascular system
- Strengthen the immune system
- Increase muscle mass
- Enhance energy levels
- Improve ability to burn fat
- Improve cognition and memory
- Increase sex drive
- Improve bone and mineral density
- Improve recovery and repair from injuries

In the first eight weeks of use, patients on Sermorelin show improvements in:

- Week 1 : Quality of sleep
- Week 2 : Recovery from workouts
- Week 4 : Mental clarity
- Week 6 : Skin elasticity
- Week 8 : Body composition
